

IN THE CLAIMS:

Please replace the claims with the following list of claims:

1. (Currently Amended) A device for telling stories comprising:
 - a) a book;
 - b) a container coupled to said book;
 - c) at least one glove;
 - d) a plurality of puppets coupled to and formed integral with said at least one glove

wherein said at least one glove is coupled to said book wherein said at least one glove can be stored in said container and wherein said puppets are in the form of at least one finger puppet; and

- e) a line, wherein said at least one glove is coupled to said book via said line.

2. (Previously Presented) The device as in claim 1, wherein said line is in the form of a string wherein said at least one glove is coupled to said book via said string.

3. (Previously Presented) The device as in claim 1, wherein said line is in the form of a cable.

4. (Previously Presented) The device as in claim 1, wherein said line is in the form of a cord, wherein said glove is coupled to said book via said cord.

5. (Previously Presented) The device as in claim 1, wherein said line is in the form of a flexible elastic element, wherein said glove is coupled to said book via said flexible elastic element.

6. (Previously Presented) The device as in claim 1, wherein said book has a front cover, a back cover and a spine coupling said front cover and said back cover together, and wherein said container is disposed in said spine of said book.

7. (Previously Presented) The device as in claim 1, wherein said container is substantially cylindrically shaped.

8. (Currently Amended) The device as in claim 1, wherein said book comprises a cover including a front cover wherein said front cover has an outside face and an inside face, said container is in the form of a pouch coupled to said inside face of said front cover, wherein said at least one glove can be stored inside of said pouch.

9. (Previously Presented) The device as in claim 1, wherein said front cover has an outside face and an inside face, and the device further comprises a fastener coupled to the inside face of said cover.

10. (Previously Presented) The device as in claim 9, wherein said fastener is in the form of a hook and loop fastener.

11. (Previously Presented) The device as in claim 1, further comprising a spindle disposed within said container, wherein said line is coupled to said spindle.

12. (Previously Presented) The device as in claim 11, wherein said spindle is rotatable within said container and wherein the device further comprises a spring coupled to said spindle for spring loading said spindle in said container.

13. (Previously Presented) The device as in claim 1, wherein said plurality of puppets

is in the form of a glove containing at least two finger puppets.

14. (Previously Presented) The device as in claim 13, wherein said at least two separate finger puppets comprise characters from a story wherein said story relates to a story in said book.

15. (Previously Presented) The device as in claim 1, further comprising at least one additional puppet and at least one additional line which is used to couple said at least one puppet to said book.

16. (Previously Presented) The device as in claim 15, further comprising an extension in the form of a stage coupled to said book.

17. (Previously Presented) The device as in claim 16, wherein said stage comprises a bottom section, at least one side section and a top section.

18. (Previously Presented) The device as in claim 17, wherein said stage further comprises a plurality of curtains with at least one curtain which is coupled to at least one of said at least one side section of said stage.

19. (Previously Presented) The device as in claim 16, wherein said book further comprises a front cover and a back cover wherein said stage is coupled to said front cover, and said back cover of said book.

20. (Previously Presented) The device as in claim 16, wherein said book further comprises a front cover and a back cover and wherein said stage is coupled to said back cover of said book.

21. (Previously Presented) The device as in claim 17, wherein said bottom section and said top section of said stage have a fold, so that said stage can be folded over.
